PROFESSIONAL SUMMARY

Recently graduated ECE engineer (BE,2026) seeking a **Graduate Engineer Trainee (GET)** position in electronics, embedded, or hardware engineering. Internship experience building a 5S Li-ion BMS on STM32 as a part of a team, and hands-on exposure to production testing, test procedures, and quality checks at Avalon Technologies. Skilled in PCB design (KiCad), circuit design, embedded systems, and hardware debugging.

EDUCATION

Bachelor of Engineering (ECE), City Engineering College, Bangalore 2023-2026
CGPA: 7.70

Diploma in ECE, Government Polytechnic Athani, Belagavi 2020-2023
CGPA: 8.30

INTERNSHIP AND EXPERIENCE

Embedded System Intern, VisionAstraa EV Academy

- Built a 5S Li-ion BMS on STM32 for EV battery packs.
- Debugged battery pack and monitoring hardware.
- Monitored cell voltage, current, and temperature in real time using ADC sampling.
- Implemented over-voltage, under-voltage, over-current, over temperature protection.
- Developed embedded firmware as a part of team.

Production Testing, Avalon Technologies

- Performed functional and quality testing of electronic assemblies on the testing line.
- Used test jigs\fixtures, oscilloscope, and multimeter to test and check boards.
- Followed test procedures and hardware quality checks.
- Gained hands-on exposure to industrial production workflows.

PROJECTS

All in one Electronic Component Tester

- Built an Arduino based tester to identify and measure resistors, capacitors, diodes, and transistors using ADC based analysis with OLED display output.

Portable Oscilloscope using Arduino & OLED

- Designed a low-cost oscilloscope for real time waveform visualization using ADC sampling and OLED display with adjustable scaling.

Agri Guard, Smart IoT Farming & Security System

- Developed an Arduino-based system for automated irrigation and field security using soil moisture, PIR, and temperature sensors with ESP8266 IoT monitoring.

SKILLS

Hardware & Electronics: PCB Design & Fabrication (Multisim, KiCad), Circuit Design, Li-ion BMS Design, Hardware Debugging

Embedded & IoT: STM32, Arduino, ESP8266, Embedded Firmware, ADC Sampling, OLED Interfacing, sensor Integration

Testing: Functional Testing, Test procedures, Quality Checks, Test Jigs/Fixtures, Oscilloscope, multimeter

Programming: Embedded C, C++, Python, Verilog, VLSI Design Basics

Currently Learning: UART, I2C, SPI, CAN, Test Case Writing & Bug Reporting (JIRA), Python Test Automation, Logic Analyzer, Git/GitHub
